Meteorology is a branch of the atmospheric sciences (which include atmospheric chemistry and atmospheric physics), with a major focus on weather forecasting. The study of meteorology dates back millennia, though significant progress in meteorology did not begin until the 18th century. The 19th century saw modest progress in the field after weather observation networks were formed across broad ...

7. Dimension 3 DISCIPLINARY CORE IDEAS—EARTH AND SPACE SCIENCES. Earth and space sciences (ESS) investigate processes that operate on Earth and also address its place in the solar system and the galaxy. Thus ESS involve phenomena that range in scale from the unimaginably large to the invisibly small.

The anomalously large radii of highly-irradiated gaseous exoplanets has long been a mystery. One mechanism suggested as a solution for hot Jupiters is the heating of the deep atmosphere via the vertical advection of potential temperature resulting in an increased internal entropy. Here we intend to explore if this mechanism can also explain the observed brown dwarf radii trend: a general ...

Atmospheric entry is the movement of an object from outer space into and through the gases of an atmosphere of a planet, dwarf planet, or natural satellite. There are two main types of atmospheric entry: uncontrolled entry, such as the entry of astronomical objects, space debris, or bolides; and controlled entry (or reentry) of a spacecraft capable of being navigated or following a ...

In the mid-latitudes, similar dynamics explain the shape and location of atmospheric teleconnection patterns, but the response to surface forcing is less well understood (see Kushnir and Held, 1996, and references therein).

context of mid-to-high latitude advective dynamics. Furthermore, when paired with a suitable parametrisation of the outer atmosphere irradiation profile, this mechanism alone could potentially provide a complete explanation for the observed levels of radius inflation in our brown dwarf sample.

A new report from the International Energy Agency (IEA) has found that China's existing policies put its CO₂ emissions on track to peak by the mid-2020s, Argus Media reports. The outlet notes that China has the capacity to accelerate its transition to clean energy sources and reach carbon neutrality before 2060, according to the report.

Another critical area for atmospheric chemistry is boundary layer dynamics and meteorology. This is particularly important since most emissions occur in the boundary layer. Atmospheric dynamics in this important region have been mostly expressed as parameterizations in numerical models (Stull, 1988).

This paper examines the actor's personal approach to developing a role or character for performance. The actor begins her analysis by establishing what her acting process was when she first began her training as part of the MFA Acting program at The University of Iowa and examines how this training, along with performances, has re-shaped and re-defined how she approaches not just a role but ...
